DOUGLAS EBHOMAN

Technical Writer · Docs-as-Code · Developer Documentation

douglas@douglasebhoman.com · Prague, Czechia · LinkedIn · GitHub · douglasebhoman.com

PROFESSIONAL SUMMARY

Technical Writer specialising in Docs-as-Code workflows, Git-based documentation systems, and developer-facing content. Author of a six-part series on Git and GitHub for technical writers — deployed as a live static site via GitHub Actions and maintained as a versioned GitHub repository. Experienced writing for audiences ranging from complete beginners to developers, with a demonstrated ability to architect, version, and deploy documentation the same way engineers ship code.

WRITING PORTFOLIO

Git & GitHub for Technical Writers — *Hashnode Series · Live MkDocs Site · GitHub Repository · Six Parts*

git-and-github-for-technical-writers.hashnode.dev · github.com/Douglasebhoman/git-github-for-technical-writers-series

A complete Docs-as-Code project — not just written about the workflow, but built with it. Every article is authored in Markdown, version-controlled in Git, and deployed automatically to GitHub Pages via a GitHub Actions pipeline.

- Part 1: Git Basics for Technical Writers — version control fundamentals for a non-developer audience
- Part 2: Git vs GitHub — the distinction between local and remote version control in documentation workflows
- Part 3: From Editing Files to Managing Versions — how commits create structured, recoverable documentation history
- Part 4: Pull Requests for Technical Writers — documentation governance and controlled state transition in Docs-as-Code environments
- Part 5: CI/CD Pipelines — how GitHub Actions automates the complete documentation delivery lifecycle
- Part 6: Documentation Architecture — structuring Docs-as-Code repositories for scale using the Diátaxis framework

Static Website Security & Architecture Review — *GitHub Repository*

github.com/Douglasebhoman/static-portfolio-site

- Architecture and security documentation for a static frontend — covering system design decisions, security considerations, trade-offs, and explicit scope boundaries.
- Written for multiple audiences simultaneously: technical stakeholders, non-technical product teams, and complete beginners — demonstrating audience-adaptive documentation structure.
- Decision-driven documentation: every architectural choice is explained with rationale, known limitations, and alternatives considered.

OpenWeather API — Getting Started Guide — *GitHub Repository*

douglasebhoman.com/openweather-docs

- Hands-on API documentation walkthrough built using the OpenWeather REST API and Postman — covering authentication, endpoint structure, request parameters, and response interpretation.
- Written for developers encountering a REST API for the first time, demonstrating the ability to document technical workflows at the level of detail engineering teams expect.
- Structured in Markdown following Docs-as-Code standards with clear separation between conceptual explanation and procedural steps.

Getting Started with Notion — *GitHub Repository*

github.com/Douglasebhoman/notion-beginner-guide

- Beginner-level product documentation for Notion — written for non-technical users with annotated screenshots and structured walkthroughs.
- Demonstrates ability to document consumer-facing products with the same structural discipline applied to developer tools.

PROFESSIONAL EXPERIENCE

Technical Writer — Independent Practice

Nov 2025 – Present

Prague, Czechia

- Authored and maintains the Git & GitHub for Technical Writers series — a six-part Docs-as-Code project published on Hashnode, deployed via GitHub Actions to a live MkDocs site, and maintained as a versioned GitHub repository.
- Produces architecture and security documentation for static frontend projects, writing simultaneously for technical stakeholders and non-technical product teams within the same document.
- Built and maintains an automated documentation deployment pipeline using GitHub Actions — the same CI/CD workflow described in the series.
- Grew a LinkedIn audience from zero to 500+ connections through consistent technical writing content, generating substantive engagement from senior practitioners with decades of industry experience.

Freelance Writer & Content Creator — Independent

2023 – 2025

Remote

- Produced long-form content across multiple topics over two years, developing editorial discipline, consistent writing habits, and an audience-adaptive voice.
- Transitioned writing practice into technical documentation following completion of web development training in May 2025 — applying structural and narrative instincts directly to developer-facing content.

TECHNICAL SKILLS

Documentation: Technical guides, user manuals, API documentation, tutorials, knowledge base articles, release notes, architecture documentation, security documentation

Tools & Platforms: Git, GitHub, Markdown, MkDocs, GitHub Actions, GitHub Pages, Postman, Notion, Google Docs, VS Code

Technical Knowledge: HTML5, CSS3, JavaScript (basic), REST APIs, CI/CD pipelines, static site architecture, Docs-as-Code workflows, Diátaxis framework, version control systems

Methodologies: Single Source of Truth architecture, atomic commit discipline, documentation state management, audience-adaptive writing, information hierarchy

---

EDUCATION

Diploma in Web Development

Apr 2024 – May 2025

Complete Computer Technology (CCT) · Benin City, Nigeria

- Completed a structured programme covering HTML5, CSS, and JavaScript fundamentals — applied directly to building and deploying a personal portfolio site on GitHub Pages.
- Practical outcome: production-ready static site built with semantic HTML, CSS custom properties, and vanilla JavaScript, version-controlled and deployed via GitHub Actions.
